# **DIGITAL LITERACY PROJECT REPORT**

## **Submitted by :**

Name: Pari Porwal

Registration Number: 25BAI10001

Branch: B.Tech (AI & ML)

Year: First Year

Course Code: CSE0001

Course Title: Digital Literacy

# Introduction

The project was carried out as part of the Digital Literacy course with the aim of acquiring knowledge and applying the fundamental digital literacy skills in real-life situations. The project is part of the Student Digital Ambassador role and aims to promote awareness of the importance of the responsible and effective use of digital tools and platforms. The project covers various topics such as the creation of visual content, development of a professional online presence, coding platforms, email etiquette, and the importance of cybercrime and online safety.

Through the project, I have had the opportunity to work with various digital tools and platforms, which are essential for academic and professional development. I have also had the chance to comprehend the importance of developing a digital presence and the need to be aware of the potential risks. Overall, the project has helped me improve my knowledge of digital literacy and its importance in the contemporary world.

## **Task 1: Digital Literacy Infographic**

I made my Digital Literacy infographic with the help of Canva, which offers a simple interface and a range of templates, icons, and other design elements that are essential for creating engaging content. My infographic is named “Digital Literacy: A Smart Student Guide,” and it covers three major topics: digital literacy, digital tools for students, and a professional online presence.

The first section of the infographic describes digital literacy as a tool for effective communication, learning, and information sharing while also focusing on digital safety and responsible use. In the second section of the infographic, some of the significant digital tools that are beneficial for students are highlighted, including Google Docs, Canva, GitHub, and online meeting tools. In the third section of the infographic, the importance of a professional online presence is emphasized by explaining the significance of clean profiles, LinkedIn and GitHub profiles, and responsible sharing of achievements.

While making the infographic, it was interesting to work with elements like icons, colors, and layout while creating content. One challenge I faced was selecting the most relevant points and

ensuring the design remained clean without overcrowding it with too much information.

## **Task 2: Digital Portfolio**

For this purpose, I have created my digital portfolio through three websites: GitHub, LinkedIn, and Kaggle. These websites are popular among students and professionals to have an online presence.

GitHub is used to store and share my code. I have created a profile README to let other users know about myself. I have also mentioned my interests and goals. LinkedIn is a professional networking website. I have added my educational information and created a basic profile. This will allow me to connect with other people and stay updated about career opportunities. Kaggle is a website focused on data science and machine learning. I have created my profile to learn more about data science and machine learning in the future. These websites will be helpful to me in the next four years. I will be able to track my progress through these websites. I will also be able to apply for internships and job opportunities through these websites by showcasing my skills and accomplishments in a professional way.

## **Task 3: Coding & Collaboration Platforms**

For this task, I chose one coding practice site and one collaborative site. The coding practice site that I chose is HackerRank, which is a popular platform for practicing coding. By using this site, I was able to practice coding by creating an account and solving one of the problems, which was a beginner-level problem. Additionally, I was able to explore my profile, which showed the badges that I earned using the site. The badges indicate the level of proficiency in different areas.

For the collaborative site, I created a Google Form titled “Digital Literacy Awareness Quiz” that contains five questions related to the concepts of digital literacy. The questions were related to internet safety, password management, and professional online presence. The form was then shared, and the responses were recorded. The recorded responses were then saved in a Google Sheet.

These sites are very useful for academic growth. The HackerRank site is very useful for improving coding skills, while the Google Form site is very useful for collecting data, creating quizzes, and collaborating with others.

## **Task 4: Email Etiquette & Social Media**

In this task, I learned to effectively comprehend and employ good practices of digital communication. In Part A of the task, I composed two formal emails: one for requesting an extension of time for an assignment and the other for expressing interest in a summer internship program. While composing these emails, I learned to ensure that the emails contain subject headings, greetings, body composition, and closing remarks. This helped me understand the significance of maintaining a formal tone while communicating.

In Part B of the task, I composed a social media Do's and Don'ts checklist to encourage responsible behavior among students through social media platforms. The checklist includes major practices such as having a professional social media profile, respecting others on social media, and not disclosing sensitive information or inappropriate content.

## **Task 5: Cybercrime Awareness**

During my research on cybercrime for this task, I was surprised by how easily anyone could become a victim of UPI scams through simple tactics like fake calls and payment requests. I came to understand that most people are not aware of how sharing OTPs or making unauthorized requests could lead to instant money loss.

The task has helped me grasp the importance of being vigilant when using digital payment systems. One of the main changes I will make is being sure to check the source before making any transaction or sharing information online. I will also ensure I enlighten those around me on how to use digital systems safely.

## **Conclusion**

This project has helped me gain valuable insights into different facets of digital literacy and its significance in everyday life.

Through the different tasks assigned to me, I was able to comprehend the effective use of digital tools, how to maintain a professional online presence, and how to communicate digitally. In addition, I was made aware of the different cyber threats and how to stay safe online.

This project has helped me gain a better understanding of how digital literacy can be effectively used in academic and professional life. It has made me a responsible digital citizen and has motivated me to enhance my digital literacy skills in the future.
